Claim-evidence matrix: supports / refutes / unknown

supports refutes unknown

Every cell names the experiment and its source file; numeric evidence is read from the result JSON.

Claim	E1 k entropy	E6 logprob k	E2 L2 inference	E3 agent e2e	X1 cloud matrix	C2 circuit L0-L2	CC composition
C-k k ≥ 40 bit for all 50 XSTest prompts universal threshold	unknown 50/50 at N ceiling; k=5.64; cannot certify ≥40 k_entropy_largeN.json	refutes 16/50 Qwen, 11/50 Mistral <40 bit; greedy k=0 50/50 k_logprobs.json	unknown not addressed policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	unknown not addressed scale-cloud.json	unknown not addressed c2/verify_L*.json	unknown not addressed composition_controls.json
C-L2 L2 evidence commitments leak policy identity v1 certificate payload	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	supports L2 0.382 vs L2* 0.014 (constructive); 0.112 vs 0.017 (real) policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	unknown not addressed scale-cloud.json	unknown L0/L1/L2 verified (3 tiers); delegated empty; no inference run c2/verify_L*.json	unknown not addressed composition_controls.json
C-OOM Prover memory binds; core feasible set is non-rectangular not a time-only cost	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	unknown not addressed policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	supports 16/18 pass; 2 OOM at 10000x3; 6-rule 5000 OOM scale-cloud.json	unknown not addressed c2/verify_L*.json	unknown not addressed composition_controls.json
C-e2e A real agent issues and third-party verifies certificates mechanism, not model safety	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	unknown not addressed policy_corpus_infer.json	supports 19 certs; 11/11 checks PASS; proof_mode=unproven agent_e2e_deepseek.json	unknown not addressed scale-cloud.json	unknown not addressed c2/verify_L*.json	unknown not addressed composition_controls.json
C-cost core/groth16 proving cost is measured not a ranking	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	unknown not addressed policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	supports core 39.8-100.3 s; g16 279.3-343.8 s scale-cloud.json	unknown verification only; no cost measured c2/verify_L*.json	unknown not addressed composition_controls.json
C-deleg A delegated rule without a companion proof fails closed conjunctive obligation	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	unknown not addressed policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	unknown not addressed scale-cloud.json	unknown delegated not implemented c2/verify_L*.json	supports cell d: true but unsatisfied; fail closed composition_controls.json
C-strong Composition binds the user input x_U strong form, not derive(T_U)	unknown not addressed k_entropy_largeN.json	unknown not addressed k_logprobs.json	unknown not addressed policy_corpus_infer.json	unknown not addressed agent_e2e_deepseek.json	unknown not addressed scale-cloud.json	unknown not addressed c2/verify_L*.json	refutes cell c: weak form only; strong not landed composition_controls.json

Verdicts are an author mapping of each experiment's measured result to the claim as stated; numeric evidence is read from the JSON and asserted at build time. unknown = the experiment does not address the claim, not a negative result. E1 is N-capped (cannot certify k); E6 is an upper bound (left of 40 bit refutes, right does not certify); E3 is host-check only (proof_mode=unproven); X1 OOM points are observed kills, not peaks; C2 did not implement delegated; CC cell c is the weak form only (proof debt E-1). Sources: bench/results/{k_entropy_largeN,k_logprobs,policy_corpus_infer,agent_e2e_deepseek,scale-cloud,scale-6x5000}.json, c2/verify_L{0,1,2}.json, composition_controls.json.
