
Sources: bench/results/ablation.json (execution) and dos_proof.json (proving; 24-core / 14.6 GiB host, pre-NFA-fix binary b81e6d07..., core tier). Points at n=25/50/100 are separate runs; no n>=100 naive or n=400 proving point was measured, so no proving curve is drawn. The n=50 point is an observed kill at measured peak.
